DRicore SMARTWALL®
Makes it Easy

Depending on your local building code requirements you may need to increase the R-Value of the SMARTWALL system (see chart below).

<table>
<thead>
<tr>
<th>EPS (Expanded Polystyrene)</th>
<th>SMARTWALL</th>
<th>TOTAL R-VALUE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1&quot; (R4)</td>
<td>R17.4</td>
<td>R21.4</td>
</tr>
<tr>
<td>1.5&quot; (R6)</td>
<td>R17.4</td>
<td>R23.4</td>
</tr>
<tr>
<td>2&quot; (R8)</td>
<td>R17.4</td>
<td>R25.4</td>
</tr>
</tbody>
</table>

These combinations comply with the building codes across North America and mean increased energy savings for your home.

Note: Follow the EPS (Expanded Polystyrene) manufacturers installation instructions for fastening to the concrete wall.

**Easy Installation**

1. First install DRicore® Subfloor
2. Using 2” x 2” lumber attach your top track first to your floor joists.
3. Next, fasten EPS (Expanded Polystyrene) boards to the concrete wall. (E.g. Use 4 to 6 concrete nails and washers per board as needed.)
4. Using 2” x 2” lumber attach your track to your DRicore® Subfloor leaving a ½” space at each bottom corner of the room.
5. Offset track by 2 ¾” from the front of the top track to the front of the bottom track.

*Install DRicore SMARTWALL® panels.*

Use DRicore® Patch pro to fill the micro bevel seams and complete your wall.
